Grade Six Math Curriculum

Grade 6 Math

Ratio and Proportional Relationships

- Understands ratio concepts and uses ratio reasoning to solve problems.
- Solves unit rate problems.
- Makes tables of equivalent ratios.

The Number System

- Applies and extends previous understandings of multiplication and division to divide fractions by fractions.
- Computes fluently with multi-digit numbers and finds the common factors and multiples.
- Fluently multiplies and divides multi-digit decimals.
- Finds the greatest common factor and least common multiples.
- Applies and extends previous understandings of numbers to the system of rational numbers.
- Understands that positive and negative numbers are used together to describe quantities as having opposite directions or values.

- Finds and positions integers and other rational numbers on a number line.

- Understands ordering and absolute value numbers.

Expressions and Equations

- Applies and extends previous understand of arithmetic to algebraic expressions.
- Applies the Distributive Property to expressions.
- Applies the order of operation.
- Applies properties of operations to produce equivalent expression (i.e. $y + y + y = 3y$).
- Reasons about and solves one variable equations and inequalities.
- Writes and graphs an inequality in the form of $x > c$ or $x < c$ and $x + c < a$ or $x + c > a$, and recognizes that inequalities have infinitely many solutions.
- Represents and analyzes quantitative relationships between dependent and independent variables by writing and solving equations in the form of $x + p = q$ and $px = q$.

Geometry

- Solves real-world and mathematical problems involving area, surface area, and volume.

Statistics and Probability

- Interprets data through measures of center (mean and median) and the variability (interquartile range and mean absolute deviation) as well as describes the pattern deviations.
